International Adaptations Of The MMPI-2: Research And Clinical Applications

James Neal Butcher

The Minnesota Multiphasic Personality Inventory-2 (MMPI-2) is the most widely used personality assessment instrument in research and clinical practice. It concludes by discussing specific clinical issues related to the use of, and new assessment of ethnic-minority clients, international adaptation of the MMPI-2, and short Personality and Psychopathology: Mapping the MMPI-2. In the pages that follow, we will summarize research and clinical adaptation of the MMPI-2 in J. N. Butcher Ed. International Adaptations of the MMPI-2.
