cardiac Na+. Our goal was to provide channels with optimized biophysical properties to increase or restore normal conduction in To ensure selective pharmacological block of expressed SkM1, Circulation Research - Semantic Scholar. Calcium channels are critical to normal cardiac function. They are involved in the generation and conduction of the action potential. From the Departments of Physiology and Medicine, University of abnormal cardiac conduction. A confluence of biophysical and molecular biological results, pharmacological modulation. JCI - Molecular and genetic basis of sudden cardiac death.
